

Student Technology Acceptable Use Agreement

Parent or Legal Guardian Acknowledgment

The following agreement outlines the expectations and guidelines surrounding student use of a school-issued device (including power cord). The use of school-issued devices is extremely beneficial for students as a resource, however, is considered a privilege for all students.

- **I accept full responsibility for consistent supervision of my child's use of the NGA's school-issued device and will monitor my child's work.**
- **I understand that it is impossible for NGA to restrict access to all offensive and controversial materials but will actively monitor my student while on their device.**
- **I understand that the school-issued device is monitored and managed by the school. Any information, data, or work completed on or saved to the device is subject to review. Additionally, I am advised that any work students complete should be saved externally.**
- **I understand that my student's use of a device will be limited or suspended for using the device for inappropriate or unauthorized purposes.**
- **Further, I understand the importance of keeping the device (including power cord) in good condition, following the return policy, and to utilize for instructional purposes only.**
- **I agree to return the device (including power cord) at the designated date assigned and keep the device (including power cord) in good working condition.**
- **I accept responsibility for damages to the device (including power cord) while in possession of my student in school or at home.**
- **I understand that the device assigned to my student is for use at school only, unless otherwise directed in writing by school staff.**

**Please note that the cost to repair/replace the device is \$150.00, and the power cord \$30.00.*

As the parent/guardian of an NGA student, I have read, understand, and agree that my child shall comply with the terms of this Acceptable Use Agreement. By signing this Agreement, I give permission for my child to use NGA's technology device.
